Management of trade associations

ISA and its companies have a stakeholder relations strategy, in which the trade associations play a relevant role as the company's connection with the business, sector and country dialogues. In turn, the objective of participation in these spaces is to contribute to the construction of public policy, participate and lead conversations for the transformation of the sectors for the benefit of society and create collaborative networks that allow alignment with the priorities of the countries.

Today, ISA and its companies actively participate in more than 100 relationship spaces in the countries where it operates, with defined work teams, spokespersons, and consolidated agendas. **These spaces do not have among their objectives to finance or promote political parties, their representatives, or candidates, or do they sponsor congresses or activities aimed at political propaganda.**

Asociación Nacional de Empresas de Servicios Públicos y Comunicaciones (ANDESCO) Development of the energy sector in the new National Government Bill regarding Energy Transition.	Support	ISA, ISA Energía Colombia, Transelca, XM, and Internexa are members of ANDESCO, the trade association grouping the main public utility companies in Colombia. ANDESCO has developed a robust advocacy agenda on energy transition and climate change, with the following key actions: • Regulatory positioning: ANDESCO has actively engaged with the Energy and Gas Regulatory Commission (CREG – Comisión de Regulación de Energía y Gas) and the Ministry of Mines and Energy to build regulatory frameworks that facilitate the integration of non-conventional renewable energy sources (NCRES) into the transmission grid, which is essential for meeting Colombia's Nationally Determined Contribution (NDC). • ANDESCO Congress: Through its annual congresses, the association has served as a forum for debate on the decarbonisation of the Colombian electricity sector, energy efficiency, and climate targets under the Paris Agreement, with direct participation from national government officials. • National Trade Council: ANDESCO is part of the inter-association committee that signed the Declaration of Commitment to the Energy Transition at the ANDESCO Congress, reaffirming the private sector's commitment to decarbonisation. • Dissemination and awareness: The association has published analyses and position papers on Colombia's alignment with the Paris Agreement, highlighting the importance of the energy transition as a lever for meeting national climate commitments.	\$345.621.950*
ABRATE (Brazilian Association of Electric Energy Transmission Companies) For the viability of the energy transmission business.	Support	The Company works closely with ABRATE, seeking synergy in its representation before decision-making bodies, with the goal of preserving the legal and regulatory security of the sector, promoting the efficiency of the electrical system, ensuring quality operating and maintenance conditions, ensuring fair returns on investments, strengthening the sector's reliability in providing services to Brazilian society, and expanding the National Interconnected System. Among the most relevant topics managed through ABRATE are: • Tariff regulation, asset remuneration and transmission quality • Regulation of the Energy Storage System • Improvement of regulations regarding the extension of concessions at the end of their validity period • Promulgation of the Brazilian Emissions Trading System (SBCE), with debates on compensation models and criteria and guidelines on voluntary and regulated carbon markets.	\$204.453.734

Name of organization, candidate or topic	Type of Organization	Total amount paid in FY 2025
World Economic Forum International non-profit organization that promotes public debates on global issues. Its objective is sustainable development, the constant improvement of public and private organizations and the progress of society. It promotes the concept of Conscious Capitalism and the Fourth Industrial Revolution that today are pillars of corporate application around the world. And its discussions have addressed fundamental issues of global concern, such as international conflicts, poverty, environmental problems, and their possible solutions. In the last 10 years, emphasis has been placed on issues such as new geopolitical dynamics, the Fourth Industrial Revolution, globalization, climate change, sustainability and rebuilding political trust at the international level.	In 2025, the World Economic Forum (WEF) focused its energy transition agenda on two fronts. At Davos, where the Chairman of ISA's Board of Directors participated, energy was one of the central themes — with a stronger emphasis than in previous years on energy security, rising demand, and the role of energy as an enabler of economic development, with artificial intelligence (AI) and United States energy policy as cross-cutting axes of the debate. In parallel, the WEF published in June its flagship report <i>Fostering Effective Energy Transition 2025</i>, developed in partnership with Accenture, whose Energy Transition Index recorded an annual improvement of 1.1% in the global average — more than double the pace of the preceding three years — while cautioning about persistent vulnerabilities, given that global energy demand grew by 2.2%, driven by economic growth, heat waves, electrification, and the expansion of AI data centres. The report, which was shared with ISA, identified three systemic priorities to maintain progress on track: redefining energy security beyond traditional supply to encompass grid resilience and digital infrastructure; correcting capital imbalances, particularly in emerging economies; and resolving infrastructure bottlenecks — permitting processes, talent gaps, and grid capacity constraints — that currently impede the translation of technological readiness into tangible deployment.	COP \$957.603.299
Institute of Electrical and Electronics Engineers – IEEE This contribution includes the value paid by ISA IEEE is the world's largest technical professional organization dedicated to advancing technology for the benefit of humanity. Through this think tank, technology developments and references applied to the energy and electricity sector worldwide are shared	Trade association IEEE, an association dedicated to advancing innovation and technological excellence for the benefit of humanity, is the world's largest technical professional society. It is designed to serve professionals involved in all aspects of the electrical, electronic, and computing fields and related areas of science and technology that underlie modern civilization. IEEE members can access information on local events and activities an integrated multi-functional platform and global network of technology-focused professionals, leveraging IEEE's extensive knowledge base and community of thought-leaders. IEEE provides: • Network with other technology professionals • Establish a professional profile highlighting your accomplishments • Join and participate in discussions on various technical interests • Create a group to share and collaborate on projects. • Contribute to the improvement of public understanding of engineering and technology and seek standards for their practical application	COP \$216.430.500
Asociación de Concesionarios de Obras de Infraestructura Pública – COPSA COPSA is the industry association representing public infrastructure concessionaires in Chile. It advances the public-private partnership (PPP) model and plays an active role in policy dialogue, supporting the ongoing strengthening and long-term sustainability of the concession system	Trade association ISA Vías Chile's participation in the Public Infrastructure Concessionaires Association (COPSA) in 2025 was marked by the defense of the public-private partnership model. In this context, we took part in the co-creation and validation of the document '5 Proposals x 5 Reasons,' aimed at reactivating infrastructure investment for the 2026–2030 period. This document was distributed to both government authorities and the programmatic teams of presidential candidates, arguing that public-private partnerships optimize public spending and enable investments through private financing. Similarly, through the association, regulatory advocacy efforts were coordinated, particularly against a bill repealing Article 114 of the Traffic Law, which would eliminate penalties for users driving without an activated TAG.
